

Bathtub Access made Easy

THE TUBCUT creates any size passageway in the front of existing bathtubs.

It is installed in fiberglass or metal tubs within a day.

The process uses custom-fitted panels that become integral with the tub's construction. This gives the **TUBCUT** a watertight construction and a factory made look. The threshold is 5" above floor level. The existing shower curtain will prevent water from splashing out.

Does anyone you know need this? Give us a call today!
